SUMMARY

Full-stack engineer and AI-product builder with **7+ years shipping production systems end-to-end**, from 0 to 1 launches to scale. **Founder of AI Daily** (aidaily.now), an LLM-powered news platform reaching 50,000+ subscribers across the global AI industry, solo-built across LLM pipeline, full-stack, and growth. Hands-on across the entire AI application stack (**LangChain, OpenAI APIs (GPT-3.5/4), RAG, vector stores, embeddings, prompt engineering**) with the engineering depth (**Java, Python, React, Node.js, Spring Boot, AWS/GCP**) to turn AI prototypes into reliable, monetizable products. Actively seeking full-stack engineering and AI-product builder roles at top-tier U.S. firms, where I can ship customer-obsessed products in fast-paced, ambiguous, high-stakes environments.

SKILLS

AI & LLM Engineering: LangChain, RAG, vector stores, embeddings, prompt engineering, AI agents, AIGC content pipelines (ingestion → ranking → summarization → distribution), Claude, Codex, Cursor

Languages: Java, JavaScript/TypeScript, React, Node.js, Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, R, HTML/CSS, jQuery

Frameworks & Cloud: Spring Boot, Express, Hibernate/JPA, Ant Design, AWS (App Runner, RDS, Amplify), GCP (Cloud Run, Cloud Storage), Docker

Data & Infrastructure: PostgreSQL/PostGIS, MySQL, MongoDB, Snowflake, RESTful APIs, microservices, distributed systems, CI/CD, ETL pipelines

Expertise: System design, A/B testing, full-funnel instrumentation, growth analytics, Tableau, Google Analytics, Agile/Scrum

WORK EXPERIENCE

AI Daily Inc.

Founder

Mountain View, CA

Feb 2025–Present

Scope: Solo-built and scaled an LLM-powered AI news platform delivering 6 curated briefs in a 5-minute weekday read; sole owner of AI engineering, product, growth, and ops.

- **LLM Pipeline:** Architected an end-to-end AI content pipeline on Python + LangChain + OpenAI APIs, ingesting 500+ daily AI stories, ranking by signal, and auto-summarizing into 6 high-density briefs; cut editorial cycle time ~70% and removed humans from the critical path.
- **Full-Stack Build:** Designed and shipped the platform solo on a capital-efficient stack, owning React frontend, Node.js backend, email infrastructure, analytics, and archive site from prompt design to production deployment.
- **Audience Growth:** Compounded readership 5x QoQ to 50,000+ subscribers in <15 months at open rates ~2x the industry benchmark; ran 40+ A/B tests on subject lines, send times, and content mix, lifting opens 25% and tightening retention cohorts.
- **Production Reliability:** Shipped 300+ consecutive weekday editions with a strict morning publish SLA, built monitoring, fallback paths, and automated QA so a one-person operation behaves like a reliable platform.
- **AI Fluency:** Daily editorial coverage of model releases, agent frameworks, and industry moves keeps technical context sharp, from frontier labs to applied AI in marketing, search, and consumer products.

Sachi Cares Inc.

Technical Program Manager & Full-Stack Engineer

Mountain View, CA

Aug 2025–Present

Scope: Built and scaled a two-sided childcare marketplace, owning core systems and AI-powered product features.

- **AI Features:** Shipped AI-powered semantic matching and automated session summaries, driving up to 50% lift in user activation and retention.
- **Platform Architecture:** Built core marketplace systems (auth, booking, payments, verification) in React and Node.js/Spring, raising onboarding-to-booking conversion by ~30%.
- **Scalable Systems:** Designed high-availability services for real-time scheduling and transaction workflows, holding consistent performance under growing user load.
- **Performance Optimization:** Tuned PostgreSQL/PostGIS and trimmed API hot paths, accelerating search and booking flows.

- **Execution Velocity:** Delivered end-to-end features in Agile sprints, lifting engineering throughput ~25% against a \$1M+ GMV product roadmap.

First Republic Bank

Data Scientist Lead, Data Analytics & Automation

San Francisco, CA

Nov 2022–Jul 2023

Scope: Engineered data tools and infrastructure powering Internal Audit's analytics strategy and automation.

- **Pipeline Engineering:** Built scalable Python/Snowflake ETL pipelines as reusable building blocks across audit workflows, boosting data accessibility 60% and slashing query latency 40%.
- **Tool Delivery:** Shipped 8+ internal analytics tools and automation pipelines via Agile sprints with auditors and engineers, eliminating 50% of manual reporting overhead.
- **Data Visualization:** Built 12+ interactive Tableau dashboards tracking collateral valuations and compliance gaps across 3,000+ real estate loans, surfacing \$25M+ in previously undetected exposure.
- **Code Optimization:** Refactored legacy scripts and standardized 1M+ records across 500+ fields, accelerating downstream analysis 35% and cutting data prep from days to hours.

Atomyze LLC

Data Scientist Lead, Product

Greenwich, CT

May 2020–Nov 2022

Scope: Led full-stack delivery of blockchain-based digital-asset products from concept through production launch.

- **Platform Launch:** Shipped a digital-asset tokenization and trading platform end-to-end; managed delivery via Jira and raised engineering velocity 25% through structured sprint planning and CI workflows.
- **Scrum Execution:** Led a 2-engineer team and partnered with C-suite to design and deliver smart-contract-based commodity tokenization, delivering core features 30% ahead of original timelines.
- **Product Specs:** Authored 20+ PRDs aligning feature development to customer needs and revenue goals across 8+ product epics.
- **Growth Engineering:** Built and launched the company's public website with Google Analytics instrumentation; grew organic traffic 15% and cut bounce rate 20% via UX and SEO iterations.

CITIC Asset Management Co., Ltd.

Senior Manager, Investment Analytics

Beijing, China

Jul 2015–Jun 2018

Scope: Led investment analytics at one of China's largest asset managers, building tools that supported strategic capital deployment.

- **Team Leadership:** Directed a 3-person Beijing-based team building 6+ internal analytics tools and automated workflows, powering investment decisions across 50+ healthcare-sector deals.
- **Financial Modeling:** Built scalable IRR/ERV modeling frameworks evaluating 200+ investment opportunities annually, enabling ~\$370M in annual loan deployment.
- **Data Engineering:** Spearheaded metadata analysis and data-classification integration across banking datasets; introduced automation pipelines that cut manual reporting effort 40%.

EDUCATION

LaiOffer Academy

Software Engineering & Full-stack Development Program (1,500+ hours)

Santa Clara, CA

Jul 2023–Mar 2025

Completed 1,500+ hours of rigorous full-stack courses focused on real-world projects, algorithms, and system design.

Columbia University

M.S., Applied Analytics (GPA: 4.0 / 4.0)

New York, NY

Aug 2018–Dec 2019

Relevant Coursework: Machine Learning, SQL & Relational Database, Advanced Python for Data Analysis, Analytics with R

University of Southern California

B.S., Business Administration (GPA: 3.5 / 4.0)

Los Angeles, CA

Sep 2012–Dec 2014
